

ABSTRACT OF THE DISCLOSURE

5 A boat ladder attached to a trailer for easy access
to a bow of a boat. The ladder comprises two side rails
with spaced-apart steps or rungs between the side rails,
the lower portion of one of the side rails curving a
predetermined distance toward the other side rail and
then running parallel with the other side rail wherein
the lower ends of the ladder side rails fit into bases
secured to a front longitudinal member of the trailer.
10 The bases are secured on each side of the longitudinal
member of the trailer, and the lower ends of the side
rails fit into cylindrical tubes attached to the sides of
the base.
